

Module 4 Quiz

Quiz, 5 questions

1
point

1.

Which of the following is not included in WordNet:

- ☐ Sense of a word
 - ☐ Derivationally related forms
 - ☐ Pronunciation
 - ☐ Synonyms
-

1
point

2.

If the shortest distance between words A and B in the WordNet hierarchy is 6, the path-based similarity measure $\text{PathSim}(A,B)$ would be:

- ☐ 6
 - ☐ $1/6 = 0.167$
 - ☐ $1 - 1/5 = 5/6 = 0.833$
 - ☐ $1/(6+1) = 1/7 = 0.143$
-

1
point

3.

When computing the similarity between words C and D, the distributional similarity based metric gives a higher score than a path-based similarity measure. What can be inferred from this observation?

- ☐ Distributional Similarity-based measure is a better metric to compute similarity between C and D (because higher numbers are better)

Module 4 Quiz

Quiz, 5 questions

Path-based similarity measure is a better metric to compute similarity between C and D (because lower numbers are better)

- ☐ This cannot happen -- distributional similarity is always lower than path-based similarity.
 - ☐ Nothing can be inferred. The similarity values from different measures cannot be directly compared.
-

point

4.

Which of the following approaches can be used to recognize monetary values (like USD 100, JPY 1000, etc.)

- ☐ Building regular expressions
 - ☐ Looking up entries in a list
 - ☐ Checking if something is capitalized or title cased
 - ☐ All of the above
-

1
point

5.

Which of the following is not given as input for a topic modeling setup?

- ☐ Number of topics
 - ☐ The document corpus
 - ☐ The topics
 - ☐ The topic modeling approach (LDA, PLSA, ...)
-

☐ I, **HUIMIN PAN**, understand that submitting work that isn't my own may result in permanent failure of this course or deactivation of my Coursera account.
